

VERSION OF CLAIMS WITH MARKINGS

IN THE CLAIMS

4. (Amended) The power delivery system of Claim 1 wherein the power converter [converts] is adapted to convert voltage received from a power supply to a lower voltage and transmits the lower voltage to the land grid array socket.
9. (Amended) The power delivery system of Claim 6 wherein the power converter [converts] is adapted to convert voltage received from a power supply to a lower voltage and transmits the lower voltage to the land grid array socket.
12. (Amended) The method of Claim 11 wherein [the step of] mounting the land grid array socket to the power converter provides an electrical connection between the land grid array socket and the power converter.
13. (Amended) The method of Claim 11 [wherein the] further comprising mounting the land grid array socket [includes] to an integrated circuit device [mounted] affixed to a land grid array package.
14. (Amended) The method of Claim 11 wherein [the step of] mounting the land grid array socket to the power converter further comprises [the step of] mounting the land grid array socket to a printed circuit board by vertically compressing an array of contacts on the land grid array socket with an array of corresponding contacts on the printed circuit board.

15. (Amended) The method of Claim 14 wherein [the step of] mounting the land grid array socket to the printed circuit board provides an electrical connection between the land grid array socket and the printed circuit board.

16. (Amended) The method of Claim 11 wherein [the step of] mounting the land grid array socket to the printed circuit board further comprises [the step of] mounting the land grid array socket to a retention mechanism, the array of contacts on the land grid array socket mounted to the array of contacts on the printed circuit board through a relief in the retention mechanism.

17. (Amended) The method of Claim 11 [wherein the] further comprising using the land grid array socket [serves] as a retention mechanism to hold the land grid array socket in proper alignment with the printed circuit board and in proper alignment with the power converter.

18. (Amended) The method of Claim 11 wherein the power converter [converts] is adapted to convert voltage received from a power supply to a lower voltage and transmits the lower voltage to the land grid array socket.
